

Tue, 08 Jan 2019 18:14:00 GMT computer vision using local binary pdf - As applied in the field of computer vision, graph cuts can be employed to efficiently solve a wide variety of low-level computer vision problems (early vision), such as image smoothing, the stereo correspondence problem, image segmentation, and many other computer vision problems that can be formulated in terms of energy minimization. Many of these energy minimization problems can be ... Fri, 11 Jan 2019 06:36:00 GMT Graph cuts in computer vision - Wikipedia - Local binary patterns (LBP) is a type of visual descriptor used for classification in computer vision. LBP is the particular case of the Texture Spectrum model proposed in 1990. LBP was first described in 1994. It has since been found to be a powerful feature for texture classification; it has further been determined that when LBP is combined with the Histogram of oriented gradients (HOG ... I picked stereo vision because it seemed like a good example to begin with, but the technique is general and can be adapted to other vision problems easily.
